It is with great pleasure that we present to you our inaugural issue of *Journal of Nonlinear Dynamics and Applications* (JNDA). The topics of nonlinear dynamics mainly include stability, bifurcation, chaos and control of nonlinear systems. Before the 1950s, the researches on nonlinear dynamics were in the preliminary stage. In 1963, the formal proposal of chaos theory marked a major breakthrough in nonlinear dynamics. After the 1980s, nonlinear dynamics has been widely applied in physics, chemistry, biology, engineering and other fields. Since the 21st century, complex network dynamics, nonlinear control, intelligent control and other researches have become the hot topics, promoting the cross-disciplinary development of artificial intelligence, neuroscience, control science and other fields. Today, nonlinear dynamics has become an important theoretical framework for understanding the behaviors of complex systems.

Our journal aims to provide a dedicated forum for researchers and scholars to exchange ideas, fostering to the development of Nonlinear Dynamics and their Applications.

JNDA encompasses a broad spectrum of topics, but are

not limited to:

1. Dynamical Systems: Time-delay systems and stochastic systems, multi-agent systems, neural networks and complex networks, population systems and circuit systems.
2. Chaos & Bifurcations: Periodic solutions, bifurcation theory, chaotic dynamics and transient chaos.
3. Control & Synchronization: Nonlinear control strategies, stability and synchronization of nonlinear systems, finite/fixed-time control, adaptive control.
4. Advanced intelligent methods: Artificial intelligence, machine learning and big data analytics.
5. Applications: Engineering (mechanical, electrical, aerospace), physics, biology, economics and network dynamics.

JNDA thrives on the collective dedication of authors, reviewers, and editors. We welcome researchers to submit their high-quality work to our journal, where a rigorous peer-review process upholds the highest standards of scientific integrity and excellence. Our diverse editorial team brings together experts from multiple disciplines, guaranteeing comprehensive and

Guodong Zhang received the Ph.D. degree from the School of Automation, Huazhong University of Science and Technology, in 2014. He is currently a Professor and the Supervisor with the School of Mathematics and Statistics, South-Central Minzu University, Wuhan, China.

He has published over 70 journal articles, he received the 2012 Outstanding Master's Degree Thesis Award of Hubei Province, the 2015 Outstanding Ph.D. Dissertation Award of Hubei Province, and the 2016 Chinese Association of Automation Outstanding Ph.D. Dissertation Award. His current research interests include stability analysis of dynamic systems, synchronization, memristive neural networks and event-triggered control. (Email: zgd2008@mail.scuec.edu.cn)

Leimin Wang received the B.S. degree in mathematics and applied mathematics from the South-Central University for Nationalities, Wuhan, China, in 2011 and the Ph.D. degree in control science and engineering from Huazhong University of Science and Technology, Wuhan, China, in 2016.

From December 2018 to December 2019, he was a Visiting Research Fellow with the Department of Electrical, Computer, and Biomedical Engineering, University of Rhode Island, Kingston, RI, USA. He is currently a Professor with the School of Automation, China University of Geosciences, Wuhan, China. His current research interests include neural networks, memristive systems, and finite-time control. (Email: wangleimin@cug.edu.cn)
